Keywords: *COVID-19; Thrombosis; Death Rate*

COVID-19 infection (more 200 million) and death rate (more than 4.5 million, Aug 2021) are increasing irreversibly, which are affecting whole globe society's combination toward certain Darwinism's selection system, concerning human genre. Complications originating from bad treatments and unspecific diagnostics aggravate contracted patients, uninterruptedly [1-3].

As previously described different angles of the death triangle i.e. Cancer- Platelets disorders - Microorganisms (C-P-M), based on cancerogenic diseases Medicaid and Medicare.

After two years of COVID-19 infection surged up globally (M-angle corona viruses mutations), people are observing that the dominant role of M-angle attracts the whole CPM triangle moves toward M-angle, and even aforementioned triangle is growing toward creating a rectangle and possibly pentagonal forms, unpredictably. What would be the next causes aggravating current COVID-19 variants virulence?

Unfortunately, earlier described Death Triangle Machinery (DTM) [1-3] now because of COVID-19 variants are changing/ mutating toward the M-P-C and/or is inducing new angles i.e. stress-based conditions (S), and/or side effects of treatments (SE), and/or wrong selections for certain vaccines, plasma convalescent, and Medicines (WS) [4], that cannot be foreseen yet how is moving around. Though, one is predicting that the DTM is certainly mutating toward rectangle and/or pentagonal unrestrained arrangements. How?

And why? globally we are going toward such an arrangements, which is not investigated/ elucidated/ highlighted completely.

Besides, the bidirectional correlations between angels of rectangle, which could arise as novel interactions are disturbing unknown combinations, as well.

Nevertheless, the DTM activation causes significant intensification in mortality and morbidity risks in the last Centuries. Moreover, the current Medicare and Medicaid are rather imagined than facts-based real-standard- research and development to prevent the DTM progression, discriminatory.

Today thrombosis is still one of the main causes of affecting mortality and morbidity rate either out and/ or in-hospitals. Cancer treatments' side effects result in an unintentional cancer-related thrombosis (CAT). From 153 years ago up to now, was the CAT indicated as an important death cause [1,5]. There is a rare incidence of progression to myelofibrosis and myeloid metaplasia in both disorders, which may or may not precede transformation to acute myeloid leukemia, but thrombosis (disorders of P-angle from the DTM) is the main cause of morbidity and mortality of patients [5], in the 21th Century.

In addition, there are so many co-factors missing at nano- and microenvironment signaling that a real mechanism of random shutdown of organs, which might work for everybody does not still exist [3] in the COVID-19 contracted patients.

One of the main key players in increasing in-hospital death rate and overall-death rate is disastrously mixed-ups of the (un-)known microorganisms pre-/ post transfusion [3,4] i.e. mixedups of viral with Fungi contamination, which is comparable recently observed in the India's COVID-19 patients (July 2021 CNN reports). Obviously, certain Fungi could get involved in the progression of COVID-19 mutations and pharmaco-toxicological side effects resulting in random shut down of organs, septic shock [6], and might (hidden) cancerogenus irregular processes. One might ask a sincere question that what is going on with the whole Health system and correlated University Medical Centers (UMCs)? and their regular research activities? Why the UMCs do not come with at least a novel solution? What happened to the UMCs in the last years? where the most novel solutions came from them. Why they cannot now offer solution against COVID-19 pandemics?

Obviously, the DTM in the advantage of infectious M-angle is busy with winning terrain, and is expanding toward new angles, which is, unfortunately, becoming the unpredictable angle (rectangle) and is growing. Moreover, one is predicting two (or more) novel angles are arising from the M-angle namely the S, the SE, the WS, and beyond at the old angels of the triangle to form either rectangle or pentagonal configuration. Why forthcoming novel angel is risky for global health problems? Because any complication in the current COVID-19 variants might increase death rate by factor 10 up to 100.

If one' prediction comes true, there will be new configurations created with so many errors in Medicare and Medicaid aspects, which could bring the human being genre to the dangerous edge(s), irreversibly.

Taken together, if and only if, immediately the Chief Policymakers do not respond appropriately, maybe the

people should need to reserve a seat, globally, and travel with Jeff Bezos to the Moon and Mars but with a one-way ticket to there, where might not the catastrophic pandemic take place.
